

# WEEK 7

## 1. Write a Java function to implement binary search.

```
week7_1.java × week7_2.java week7_3.java week7_4.java week7_5.java week7_6.java
1 import java.util.Scanner;
2
3 public class week7_1 {
4
5     static int search(int[] arr, int x){
6         int low = 0;
7         int high = arr.length - 1;
8         while(low <= high){
9             int mid = (low + high)/2;
10            if(arr[mid] == x) return mid;
11            else if(x < arr[mid]) high = mid-1;
12            else low = mid + 1;
13        }
14        return -1;
15    }
16
17    public static void main(String[] args) {
18        Scanner sc = new Scanner(System.in);
19        System.out.println("Enter the length :");
20        int l = sc.nextInt();
21        int[] arr = new int[l];
22        System.out.println("Enter elements : ");
23        for (int i = 0; i < l; i++) {
24            arr[i] = sc.nextInt();
25        }
26        System.out.print("Enter the target : ");
27        int x = sc.nextInt();
28
29        int index = search(arr, x);
30        if(index != -1)
31            System.out.println("Found at index "+index);
32        else
33            System.out.println("Not Found");
34    }
35 }
36
```

```
Enter the length :
5
Enter elements :
1 2 3 4 5
Enter the target : 4
Found at index 3
```

## 2. Write a Java function to arrange the elements of an array in ascending order (Sorting).

# WEEK 7

```
week7_1.java  week7_2.java  week7_3.java  week7_4.java  week7_5.java
1  import java.util.Scanner;
2
3  public class week7_2 {  Stephen047
4
5      static void sort(int[] arr){  1 usage  Stephen047
6          for (int i = 0; i < arr.length - 1; i++) {
7              boolean swapped = false;
8              for (int j = 0; j < arr.length - 1 - i; j++)
9                  if (arr[j] > arr[j+1]) {
10                     int temp = arr[j];
11                     arr[j] = arr[j+1];
12                     arr[j+1] = temp;
13                     swapped = true;
14                 }
15             if(!swapped) return;
16         }
17     }
18
19     public static void main(String[] args) {  Stephen047
20         Scanner sc = new Scanner(System.in);
21         System.out.println("Enter the length :");
22         int l = sc.nextInt();
23         int[] arr = new int[l];
24         System.out.println("Enter elements : ");
25         for (int i = 0; i < l; i++) {
26             arr[i] = sc.nextInt();
27         }
28         sort(arr);
29         System.out.println("Sorted Array :");
30         for (int j : arr) {
31             System.out.print(j + " ");
32         }
33     }
34 }
```

```
Enter the length :
5
Enter elements :
1 3 4 2 5
Sorted Array :
1 2 3 4 5
```

3. Write a program to reverse a given string.

# WEEK 7

```
week7_1.java  week7_2.java  week7_3.java x  week7_4.java
1  import java.util.Scanner;
2
3  public class week7_3 {  Stephen047
4  public static void main(String[] args) {  Stephen047
5      Scanner sc = new Scanner(System.in);
6      System.out.print("Enter a String : ");
7      String str = sc.next();
8      String rev = "";
9      for (int i = 0; i < str.length(); i++) {
10         rev = str.charAt(i) + rev;
11     }
12     System.out.println("Reversed string : "+rev);
13 }
14 }
15
```

Enter a String : SHaheer  
Reversed string : reehaHS

4. Write a program to check whether a given string is palindrome or not.

```
week7_1.java  week7_2.java  week7_3.java  week7_4.java x
1  import java.util.Scanner;
2
3  public class week7_4 {
4  public static void main(String[] args) {
5      Scanner sc = new Scanner(System.in);
6      System.out.print("Enter a String : ");
7      String str = sc.next().toLowerCase();
8      String rev = "";
9      for (int i = 0; i < str.length(); i++) {
10         rev = str.charAt(i) + rev;
11     }
12     if (str.equals(rev)) System.out.println("Palindrome");
13     else System.out.println("Not Palindrome");
14 }
15 }
16
```

Enter a String : Dad  
Palindrome

5. Write a program to implement factorial of a number through recursion.

# WEEK 7

```
week7_1.java week7_2.java week7_3.java
1 import java.util.Scanner;
2
3 public class week7_5 {
4
5     static int fact(int n){ 2 usages
6         if (n <= 1) return 1;
7         return n * fact(n-1);
8     }
9
10    public static void main(String[] args) {
11        Scanner sc = new Scanner(System.in);
12        System.out.print("Enter a number : ");
13        int n = sc.nextInt();
14        System.out.println(fact(n));
15    }
16 }
```

Enter a number : 6

720

6. Write a program to implement Fibonacci series of a number with and without recursion.

```
week7_1.java week7_2.java week7_3.java week7_4.java wee
1 public class week7_6 {  Stephen047
2
3     static void fib(int n){ 1 usage  Stephen047
4         if (n >= 1) System.out.print("0 ");
5         if (n >= 2) System.out.print("1 ");
6         if (n > 2) {
7             int a = 0;
8             int b = 1;
9             for (int i = 3; i <= n; i++) {
10                 int c = a + b;
11                 a = b;
12                 b = c;
13                 System.out.print(c + " ");
14             }
15         }
16     }
17
18     static void fib_rec(int n, int a, int b){ 2 usages  Stephen047
19         if(n > 0){
20             System.out.print(a + " ");
21             fib_rec(n-1, b, a+b);
22         }
23     }
24
25     public static void main(String[] args) {  Stephen047
26         fib(n: 10);
27         System.out.println("\nWith recursion : ");
28         fib_rec(n: 10, a: 0, b: 1);
29     }
```

0 1 1 2 3 5 8 13 21 34

With recursion :

0 1 1 2 3 5 8 13 21 34

# WEEK 7

7. Write a Java function to find the greatest common divisor (GCD) of two numbers with and without using recursion.

```
week7_4.java week7_5.java week7_6.java week7_7.java
1 public class week7_7 { Stephen047
2     static int gcd(int a, int b){ 1 usage Stephen047
3         while(a%b != 0){
4             int r = a%b;
5             a = b;
6             b = r;
7         }
8         return b;
9     }
10    static int gcd_rec(int a, int b){ 2 usages Stephen047
11        if (a%b == 0) return b;
12        return gcd_rec(b, a%b);
13    }
14
15    public static void main(String[] args) { Stephen047
16        System.out.println(gcd(a: 15, b: 100));
17        System.out.println("With Recursion : ");
18        System.out.println(gcd_rec(a: 15, b: 100));
19    }
20 }
21
```

5  
With Recursion :  
5

8. Write a program to check whether two strings are anagrams of each other ("listen" and "silent" are anagrams).

```
1 import java.util.Arrays;
2 import java.util.Scanner;
3
4 public class week7_8 { Stephen047
5
6     static String sort(String str){ 2 usages Stephen047
7         char[] temp = str.toLowerCase().toCharArray();
8         Arrays.sort(temp);
9         return new String(temp);
10    }
11
12    public static void main(String[] args) { Stephen047
13        Scanner sc = new Scanner(System.in);
14        System.out.print("String 1 : ");
15        String s1 = sc.nextLine();
16        System.out.print("String 2 : ");
17        String s2 = sc.nextLine();
18        if ((sort(s1).trim()).equals(sort(s2).trim()))
19            System.out.println("Anagrams");
20        else System.out.println("Not Anagrams");
21    }
22 }
23 // Examples - Listen, Silent; Heart, Earth; The Eyes, They see; Debit Card, Bad Credit;
```

# WEEK 7

String 1 : Debit Card

String 2 : Bad Credit

Anagrams

## 9. Implement quick sort using recursion.

```
week7_4.java week7_5.java week7_6.java week7_7.java week7_8.java
1 public class week7_9 {  Stephen047
2   static int partition(int[] arr, int low, int high) {  1 usage  Stephen047
3
4     int pivot = arr[high];
5     int i = low - 1;
6     for (int j = low; j < high; j++) {
7         if (arr[j] < pivot) {
8             i++;
9             swap(arr, i, j);
10        }
11    }
12    //putting pivot (high) in front of last exchange
13    swap(arr, i + 1, high);
14    return i + 1;
15 }
16 @ static void swap(int[] arr, int i, int j) {  2 usages  Stephen047
17     int temp = arr[i];
18     arr[i] = arr[j];
19     arr[j] = temp;
20 }
21
22 static void quickSort(int[] arr, int low, int high) {  3 usages  Stephen047
23     if (low < high) {
24         //pi is pivot index
25         int pi = partition(arr, low, high);
26         quickSort(arr, low, high: pi - 1);
27         quickSort(arr, low: pi + 1, high);
28     }
29 }
```
